

**Event programme**

**Writing exposure scenarios for your extended safety data sheet**

**26 January 2012** – The Nottingham Belfry, Nottingham, NG8 6PY

**Who should attend?**

Everyone supplying a hazardous substance that has been registered in their supply chain at 10 tonnes or more per year under REACH must now provide an **Exposure Scenario** (ES) as part of the extended safety data sheet (SDS). The results of risk assessment for their identified uses are presented to ECHA in the chemical safety report (CSR). However, for their supply chain to understand and manage risk the registrant must distil the relevant information into exposure scenarios supplied in an annex to the SDS.

With the focus on Exposure Scenarios this workshop is designed for those who are responsible for writing extended SDS for the substances they supply to formulators and other European downstream users.

You'll get the most from the day if you have some understanding of the science behind risk assessment and a working knowledge of safety data sheets.

**Book before 23 December for an "early bird" discount.**

**Why attend?**

This one-day workshop will deal with the following key issues:

- ✓ Understand what the exposure scenario needs to contain, and why
- ✓ Learn how to communicate the relevant content of the chemical safety report to your customers
- ✓ Appreciate how to help your customers demonstrate safe use
- ✓ Explore the templates, tools and guidance available for the exposure scenario

To do this we will use a combination of teaching and practical demonstrations. We have an informal style so there will be plenty of opportunity to quiz our experts throughout the day.

**Programme**

<b>9:00</b>	<b>Coffee &amp; Registration</b>
	<b>Importance of the exposure scenario</b> Relating the CSR to your customers' uses Communicating risk management advice through the supply chain
	<b>Decoding your CSR</b> Exposure limits for human health and environmental protection: what to do with DNELs (and WELs, OELs), PNECs
	<b>Exposure in your supply chain</b> Workers and consumers, release to the environment, identified uses, use descriptors, operational conditions (OC)
	<b>Applying your CSR for supply chain communication</b> Making the ES relevant and suitable for your supply chain, defining OC in the ES, suitable risk management measures (RMM)
<b>12:30</b>	<b>Lunch</b>
	<b>Format and content of the ES</b> Templates, style, specific or generic ES, standard phrases, level of detail
	<b>Helping downstream users</b> Risk characterisation, demonstrating safe use where OC or RMM differ, scaling options
	<b>Managing compliance</b> Industry tools, guidance and support for writers of exposure scenarios in the extended SDS
<b>16:30</b>	<b>Close</b>

This is a repeat of our sold-out workshops in 2011.
